

Resources for high-quality, informal STEM programming | August 11, 2018

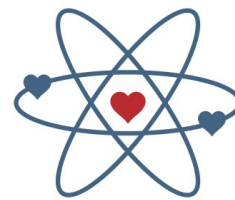

Lands' End Love Learning Award

National Summer Learning Association (NSLA) and Lands' End have teamed up to present the first-ever **\$10,000 Love Learning Award** to shine a spotlight on quality programs that bring learning to life in informal learning spaces and support families in meaningful ways. Candidates of particular interest are informal/drop-in summer programs that focus on environmental stewardship and STEM/STEAM. Applications are open through November 30.

Bringing Real-world Experts and Resources Into Your Afterschool Program

From Afterschool Snack

Afterschool programs provide such unique opportunities to reach and inspire students. There's freedom for students to try new things and explore the unknown without the pressures often felt during the school day. When I ran our district's middle school afterschool programs, I was on the constant search for real world connections and activities for students to explore. That's why we're excited to announce the Discover Data program from The Nielsen Foundation, built in collaboration with Discovery Education and The Afterschool Alliance. The resources available through Discover Data were developed to increase awareness around the power of data and data science; inspire students to pursue data-driven careers; and connect youth with role models through Nielsen volunteers. Simply go to www.DiscoverDataAfterSchool.org to access resources for your afterschool program.
